## Editorial

Hello again dear members

Welcome to the January 1990, well I said the '90's would bring changes, well they have, this issue is ready for the 15th Janury and should reach you not long after.

Next month will be a double February & March 1990 issue, so monthly members please send £2.00 instead of the monthly £1.00, because the Feb/Mar issue will be a double packed approx (45 pages) issue, I'm doing this to get in front of myself so hopefully I will have the April issue finished by the end of March but we'll just have to wait and see, so please send the £2.00 by March 15th 1990, many thanks.

Well then here it is the new look A5 format, what da ya think??

Also we have some new members, an updated listed will be displayed in next issue along with my First Part Of My Own DIY Basic Course, could'nt get it finished on time to put in this issue so next month will be a definate, sorry for that.

I've had it pointed out to me by James Nichol the author of the Luminance Colour Chart printed last month, aparently lines 160 - 230 contained a ':' at the end of each line, this should be replaced by ';' in order for the program to work correctly, many thanks James.

Next issue I will be running a competition, and theres quite a bit of software up for grabs, so look out.

Right, on page 17 of this ish you will see an advert for PAGE SETTER, the writing is in dutch or German, and I hope Ronald de Bruin from Holland can translate it for the next issue, but I've included it, because it shows what is being developed for the C16/+4 in other countries, so why can't this BLOODY country get off its BACKSIDE and do stuff like that, I know there are coders out there that could do it, so why are'nt they??

Right, Yearly subscribers will find a sheet with there mags this month, this is a re-subscribe form. This will test, to see what people have thought of the mag because if you like, then you'll most probably re-subscribe, but if you did'nt like it then they will not re-subscribe, but if its just to say GET LOST, please fill in the form and return with any payments to the address below, many thanks, and I hope that you will re-subscribe.

Well I'll close down now and let you read on, and I hope you like the mag, even though it is a little late, sorry again!!!!

Write to:- Roy Robinson, 112 Cliff Road, HORNSEA, N.Humberside, HU18 1JE.  
Telephone:- 0964-534611

If sending subscription payments, please mark envelope RE-SUBS, many thanks, it will make my life a lot easier. BYE, Roy Robinson (ED).

The following is a press release from Commodore, issued shortly before the release of the Plus/4. It's interesting because it shows some of the thought that went into the Plus/4 -- and some of the changes the concept underwent before the computer finally became available to the public.

-- c.d.

Commodore Launches New Home

Computer Line

Commodore introduced a new line of home computers at the winter CES in Las Vegas, Nevada. Designated the COMMODORE 264, the series is an addition of multiple models to the current VIC-20 and COMMODORE 64 products.

The new COMMODORE 264 line offers several models with BUILT-IN software, with its basic capabilities strengthened by many features, including: - 64K RAM (60K available for BASIC programming) - Full Typewriter-Style Keyboard - Optional Built-in Software - Screen Window Capability - HELP key - 8 Programmed, Reprogrammable Function Keys - Four Separate Cursor Keys - Compatibility with most COMMODORE 64 and VIC-20 Peripherals - 128 Colors (16 primary colors, 8 luminance levels)

Over 75 BASIC Commands - High Resolution Graphics Plotting - Split-Screen Text With High-Res Graphics - Graphic Character Set On Keyboard - Keyboard Color Controls - 320x200 Pixel Screen Resolution - Reverse and Flashing Characters - 2 Tone Generators - Built-In Machine Language Monitor (12 commands) The new models will be available for sale in late spring/early summer.

In making the announcement, Don Richard, president of Commodore Business Machines, Inc., said, 'This product line is a logical addition to the current VIC-20 and COMMODORE 64 family of computers and should expand the appeal of computer to a broader spectrum of consumers. The VIC-20 is an ideal starter computer, while the COMMODORE 64 is a versatile general purpose computer used in the home, office or school. The new COMMODORE 264 series now offers full-featured applications computers with emphasis on simplified programming, excellent graphics and built-in productivity software. This makes it useful for the serious home user, the writer, the financial analyst and the small business operator.'

'We expect the COMMODORE 64 and COMMODORE 264 series to dominate the home computer marketplace in 1984.', said Mr. Richard.

Several models of the COMMODORE 264 will be offered when the computer goes on sale in late spring, each with a different built-in software package. Although Commodore has not yet announced specific titles, built-in applications will focus on personal productivity, according to Sig Hartmann, president of Commodore Software.

Commodore also plans to have over 30 Commodore software products available on cartridge, disk, and tape when the COMMODORE 264 goes on sale.

Said Sig Hartmann, 'The key area we're emphasizing in software for the COMMODORE 264 is productivity, covering such areas as household management, word processing, calculation, business accounting, and education. We believe we are in a 'Decade of Increased Productivity'

and microcomputers like the COMMODORE 264 are going to make an important contribution helping us to get more things done, more things learned, and more things enjoyed in less time than ever before -- without sacrificing quality or efficiency.

'The COMMODORE 264 is the first personal computer offering a selection of productivity software built into the machine. In other words, by choosing a COMMODORE 264 with a particular software package built-in, you can tailor the computer to your own needs. If you use your computer to do mostly word processing, you can buy the COMMODORE 264 with professional word processing built in. If you need financial calculation, you can have a built-in spreadsheet...plus...you can use standard software on cartridge, disk or tape'

All software built into the COMMODORE 264 will also be available on plug-in cartridge. For example, someone who buys a COMMODORE 264 with a built-in word processor can buy an electronic spreadsheet on cartridge, or vice versa. In addition, software for the COMMODORE 264 will also be available on cartridge for the COMMODORE 64.

'Commodore is putting more 'software on silicon' than any other company,' Hartmann explained. 'This means putting software on ROM chips, which Commodore designs and manufactures. The cost savings which come from being vertically integrated - in other words, making computer chips as well as computers - means Commodore can build large software programs into the computer and also put more software on plug-in cartridges.

'We're definitely putting more software on cartridge because cartridge programs give the user more workspace inside the computer and are convenient to use, and because Commodore can manufacture cartridge software at consumer prices', Hartmann added.

(AND -- here's an early press

release about MicroIllustrator, an excellent graphics package that runs well on the Plus/4 in Plus/4 versions.)

#### COMMODORE INTRODUCES MICRO ILLUSTRATOR

Commodore Business Machines has reached a worldwide distribution/marketing agreement for the rights to the Commodore 64 and Commodore 264 versions of the Micro Illustrator.

Micro Illustrator, designed by Island Graphics, is the most popular microcomputer 'paint' system in the world, with its user base approaching 100,000 units. It provides users having no computer experience the power to create dazzling graphics for entertainment, business, program development or artistic expression. The Micro Illustrator is most recognized for its ease of use. The user performs the various functions by selecting from a menu of icons depicting the various features. The selection is performed with either a joystick or lightpen. In fact, the user never even has to touch the keyboard except to name a file.

Basic functions include the ability to draw freehand using a variety of brushes, colors, and textures. Other features include the ability to generate geometric figures such as lines, circles and boxes. There is also a fill feature and magnification mode, in which the user zooms in on a specific area for fine tuning.

The Commodore 64 version will utilize all 16 colors of the machine and

## SOFTWARE GUIDE PART 4

BY DAVID CAMPBELL

- 16) YOUR COMMODORE, READERS SERVICES, ARGUS SPECIALIST PUBLICATIONS, ARGUS HOUSE, BOUNDARY WAY, HEMEL HEMPSTEAD, HP2 7ST.

Over the years Your Commodore has Printed some 39 Programs within there magazines. These 39 Programs are contained on 5 Tapes or 5 Disks.

### C16 SPECIAL A (7 PROGRAMS)

THE MONSTER RETURNS - an adventure set in the creepy world of Frankenstein's monster.

SIMPLE - add icons. Pull down menus and windows to your Plus 4.

DISK MONITOR - talk directly to your disk drive.

CHANGE YOUR CHARACTER - a C16 and Plus 4 editor to redesign your character sets.

C16 ASSEMBLER - put your C16 to serious use with this invaluable utility.

BREAK THE SPEED LIMIT - a high speed tape loader.

PLUS 4 DUMPER - obtain a hard copy of everything that you do.

TAPE HEAD READER - examine the storage routine with this handy routine.

C16 SOUND SAMPLER - sample a sound from your cassette and then edit it to produce amazing results.

Order Codes :- tape YD16A disk YD16A

### C16 SPECIAL B (6 PROGRAMS)

DUAL PROGRAMMING - work with two Programs at the same time.

LOWER CASE GRAPHICS - improve the look of your Programs by using the alternative character set.

CHARACTER EDITOR - devise your own character set.

CRIBBAGE - challenge your Plus 4 to a hand of this Popular Pub card game.

SPELLING CHECKER - avoid those embarrassing mistakes with this ingenious Program.

WORD-PRO ADD-ON - improve the Plus 4's built-in word Processor.

Order Codes:- tape YD16B disk YD16B

### C16 SPECIAL C (8 PROGRAMS)

C16 SPRITES - give your C16 or Plus4 sprites like those to be found on the C64.

A demo routine is included to show you just what is Possible.

PLUS4 ANIMATOR - store a series of Pictures in memory to create moving Pictures.

REBOUND - an excellent version of the latest breakout style game.

DISK MENUES - find and load your disk Programs with ease.

TYPERD - turn your Plus4 and Printer into a Powerful electronic typewriter.

PLUS4 ASSEMBLER - an excellent machine code assembler.  
TRANSCRIPT - owners of the Script Plus Cartridge can now convert their Plus4 text files to work with this word Processor.  
PLUS4 EXTENDED BASIC - add almost 40 new commands to the BASIC on your Plus4 or C16 with memory expansion.

Order Codes:- tape YC16C disk YD16D

#### C16 SPECIAL D (9 PROGRAMS)

MONEY PLUS - organise your financial affairs with this superb Program.  
PLUS4 DATABASE - a cassette based database for Plus4 owners who don't want to buy a disk drive.  
FRUIT MACHINE - holds, nudges and a time limit make this a challenging game.  
PLUS4 WINDOWS - add IBM PC style windows to your Programs.  
CONVERTER PLUS4 - converts your machine code to BASIC data statements.  
SLEEVE PRINTER - catalogue your disks by Printing the directory on the disk sleeve.  
TEXT 80 - create 80 column displays on your Plus4 screen.

Order Codes:- tape YC16CD disk YC16DD

#### C16 SPECIAL E (9 PROGRAMS)

OOPS! - extra commands to make Programming easier.  
SPRITZ SPRITE SYSTEM - everything you need for those elusive sprites enjoyed so much by the C64 users.  
PRINT FX - special effect Printing brought to your screens.  
HEAD FOR HOME - excitement galore in this version of that Popular game Ludo.  
PLUS4 AUTORUN - create commercial style auto-running Programs on your Plus4.  
DIRECTORY EDITOR - customise your disk directories with ease.  
NUFONT - put your creative talents to use and produce your own type faces.  
HELP SCREENS - all important information at your finger tips.  
PLUS4 UTILITIES - a trio of useful utilities that makes using your disk drive easier.

Order Codes:- tape YC16CE disk YC16DE

Prices Cassettes £5.00 Disks £7.00 Overseas add £1 Per item.  
Cheques and POs should be made Payable to ARGUS SPECIALIST PUBLICATIONS.  
Allow 28 days for delivery.

N.B. YOUR COMMODORE has now dropped the C16/Plus4 these Programs were listed for sale in the December 1989 issue.

17) YORK ELECTRONIC RESEARCH, THE PADDOCKS, JOCKEY LANE, HUNTINGTON, - YORK, YO3 9NE. Telephone (0904) 610722.

PRINT ENHANCER Plus4 disk £19.99

Plus4 disk top Publishing: Proportionally spaced, high quality Printouts, from BASIC, 3+1 and script/Plus. Supplied with 15 fonts and font designer Program. MPS 801/8003, VIC 1525.

RS232 INTERFACE Plus 4 £34.99

Measuring only 12\*69\*57mm the smallest and neatest unit available. Conforms to Commodore 1011A user-Port standard. Compatible with BASIC, Easyscript, SuperScript, Superbase, Mini Office, Script Plus etc. Connect to RS232 Printers, modems and other devices. Supplied with 1 metre of cable (add 75p extra metre) terminated with a male (female) 25-way D-connector, or a custom cable made to your requirements. Our after sales service for unusual Printers guarantees to get you up and running. Supplied with a terminal emulator Program, file transfer & other utilities on tape/disk.

VIENDATA TERMINAL PLUS4 £14.99

Access Prestel, Micronet, CityService etc. Works with any user-Port RS232 interface and 1200/75 modem.

6502 ASSEMBLER Plus 4 tape/disk £12.99

A sophisticated two-pass symbolic assembler and text editor which supports tape and disk filing. The assembler, editor, source and object code may all be resident in memory simultaneously, facilitating rapid and interactive code development. Very fast edit/Assembler/test cycles.

Prices include P&P and VAT. Overseas add £2.50.

18) EEC LTD., 18-21 MISBOURNE HOUSE, CHILTERN HILL, CHALFONT ST. PETER, BUCKS, SL9 9UE. TELEPHONE (0753) 888066.

BROTHER HR100 CBM Serial £129.95

SEIKOSHA GP 500VC CBM Serial £125.00

add £6.00 Postage for Printers.

Thanks to Daniel Stokes for sending addresses of suppliers.

\*\*\*\*\*MOVING ROM TO RAM\*\*\*\*\*

\*\*\*\*\*

IN REPLY TO WAYNE KENZITTS PHONE CALL  
SOME TIME AGO (SORRY I COULD NOT BE OF  
HELP) WHEN HE ASKED ME IF IT WERE  
POSSIBLE TO EMULATE THE CARTRIDGE BASED  
RETURN TO START OF PROGRAMME WHEN THE  
RESET BUTTON IS USED.

FIRST I THINK AN AUTO-RUN PROGRAMME  
MUST BE SET UP WHICH WILL CALL AND RUN  
THE FOLLOWING PROGRAMME.

THIS WAS WRITTEN BY R.C.HERMES  
AND PUBLISHED IN 'YOUR COMMODORE' AUGUST  
1987. AS PART OF A RS232 UTILITY.

108A-108C RESET TOP OF BASIC TO \$8000

THIS HALVES THE SIZE OF +4'S MEMORY,  
NO ADDRESSES ABOVE THIS SHOULD BE USED

1085-1087 DISABLES RUN/STOP KEY,SEE  
ISSUE FOUR OF THIS MAGAZINE.

1043-106A COPIES BASIC OPERATING SYSTEM  
FROM ROM TO RAM. LOCATIONS \$8000-\$FCFF  
THEN SAME AGAIN FOR \$FF40-\$FFFF.  
106C-1092 CHANGE ALL REFERENCES TO \$FF3E  
TO \$FF3F (\$FF3E AND \$FF3F ARE ROM RAM  
SWITCHES).

1095 STORE ACCUMULATOR IN \$FF3F THE  
VALUE IS NOT IMPORTANT,THIS COMMAND  
SWITCHES OUT THE ROM AREAS FROM \$8000  
-\$FCFF AND \$FF40-\$FFFF.

1098-109A SET ROM RAM VIEW REG.TO  
ENABLE LOCATIONS ABOVE \$8000 TO BE

VIEWED.

109D-10B2 CHANGE TWO LOCATIONS \$8003  
AND \$F2A9 TO READ JMP\*\$2000 WHERE A SMALL  
ROUTINE SITS,THIS OF COURSE COULD BE  
ANYWHERE IN MEMORY.EXCEPT OVER \$8000!!!

10CA CLI BEWARE!!!! THE INTERRUPT IS  
SWITCHED ON AGAIN AND ALL PROCESSING IS  
NOW CARRIED OUT IN RAM.

10CB RTS.RETURN TO BASIC OR MONITOR  
THIS PROGRAMME WILL DISABLE THE RUN/STOP  
THE RESET BUTTON USED ALONE,AND WHEN  
THE RESET,RUN/STOP COMBINATION IS USED  
ALSO THE 'X' COMMAND TO RETURN TO BASIC  
FROM MONITOR.THIS PROGRAMME IS CALLED  
BY SYS4163,AND YOUR PROGRAMME SHOULD  
OVERWRITE IT.

FROM NOW ON ANYTHING YOU CHANGE ABOVE  
\$8000 WILL HAVE REAL TIME RESULTS.

FOR ME THAT MEANT KEY BOARD LOCK UP IN  
ABOUT 10 MINS. FROM WHICH POINT NOTHING  
WORKED NOT EVEN THE RESET KEY.

SO BEFORE YOU RUN THIS PROG SAVE IT!!!

2000-2017 SHORT ROUTINE TO PRINT ROM

KEYWORDS LIST WHEN ABOVE KEYS ARE PRESSED.

REMOVE CALLS TO KEYBOARD WHEN YOU ARE

READY AND REPLACE WITH BEQ\*\$2000 AT \$200B.

LET ME KNOW HOW YOU GET ON.

BEST OF LUCK.....PETER.

\*\*\*\*\*

## QUIXAVER for the COMMODORE C-16

QUIXAVER is a tape turbo for the C-16.

It doesn't take up any of the C-16's precious BASIC memory, and can be used in all the C-16's graphics modes as well as the text mode.

As well as BASIC programs, it can handle screens of text or graphics and blocks of machine code or data. (Sequential files need special treatment.)

It can load BASIC programs correctly even if the start-location of BASIC has been changed since they were saved.

It provides an auto-run facility for both BASIC and machine-code programs.

It can save a BASIC program complete with all its variables and reload it for further use.

It can preserve all the variables of an existing BASIC program while loading another BASIC program to replace it, so that the new program can operate with their existing values.

It fast-loads with the screen on, and progress is shown by a flying cursor.

As well as its normal QUIXAVE, it provides a shortened form — FLIXAVE — that saves time, tape, and temper when several files have to be loaded one after another.

It can be used to provide the 'OLD' function, restoring a 'NEWed' BASIC program with a simple 'LOAD'.

It works in the ordinary C-16, or in one with expanded memory (so far it hasn't been tested beyond 32K, but it should work with the full 64K), though it does clash with some commercial programs.

It can easily be disabled when not required.

It loads and initialises itself automatically whenever anything saved with it is loaded, so it rarely needs to be loaded separately.

All QUIXAVED files will load 'from cold' using the normal commands with no preliminaries, whether or not QUIXAVER is present.

\* \* \*

The origin of QUIXAVER goes back to a C-16 tape turbo by Nick Hampshire, published under the title 'Break the Speed Limit' in 'Your Commodore' for February 1986. I got this entered and running within two days of getting the magazine, and it did all that was claimed for it. But: it took up a fair amount of space at the top of the BASIC RAM; it couldn't be used in graphics modes; and it couldn't be used to append one program to another, because it wouldn't load a BASIC program correctly if the start of BASIC wasn't in the same place as when the program was saved. So I decided to have a go at modifying it, and QUIXAVER is the eventual result. I had a great deal of help from Beresford's 'C-16 Machine Language for the Absolute Beginner', Gerrard and Bergin's 'The Complete Commodore 16 ROM Disassembly', and Zaks' 'Programming the 6502', but it took a long, long, time, because I had only the C-16's simple built-in MONITOR to do it with and I'd never done any machine-code programming before.

I condensed the program by using existing subroutines from the ROM wherever I could. (I realise that this would be risky with a current-model machine because the ROM might later be changed, but that doesn't seem likely to happen with the C-16!) I found a way of calling up the 'save' routine without clearing the cassette buffer, and this allowed the first part of QUIXAVER to live there all the time; then I moved most of the remainder into an area of RAM said to be 'reserved for extra ROMs', and what was too much for that spilled over into the lower end of the 'BASIC pseudo stack', where — so far — it doesn't seem to clash with anything I've tried to do. I don't know just what the pseudo stack does, but I suspect that it handles the return addresses for subroutines, just like the processor stack, and that unless the subroutines are very deeply nested the stacking won't extend far enough down to corrupt QUIXAVER. (Any information would be welcome!) I also managed to add some extra facilities and make the program easier to use.

I did the modifications just a little step at a time, and after each step — and there were a good many hundreds of them in all — I used the program as it then stood to save and reload itself, to check that it would still work; and I've used it in its various editions for all my tape saves for the best part of three years. Throughout all these hundreds of saves and loads there has never yet been a load error except when I've done something silly. In fact I had to introduce a dummy error when I wanted to test the error-trap!

The basic method of recording bits on the tape has remained unchanged throughout, and its reliability is a tribute to the soundness of Nick Hampshire's original scheme.

\*\*\*\*\*  
\*\*\*\*\* BLOPING BUG \*\*\*\*\*  
\*\*\*\*\*

\* By PETER and MELANY CRACK 1989

Part 1.  
This is the first programme using sprites I have written,so you will have to  
\*forgive the spaces and odd jump instructions scattered here and there.  
\*The best way to save this programme,when you have all the parts entered is  
\*in two parts,The main section from \$4000-\$57BF and data from \$B000-\$C2FF  
\*So lets begin,enter monitor,type F4000 57BF EA and press return,this clears  
\*the code area,also watch the addresses as I have submitted this programme  
\*in running order,so the addresses for each piece of code do jump about a  
\*bit.This month deals with the scene setting and instructions,when you have  
\*entered it,save it!!!.Then run it,and to run it type G5100 and press return  
\*It will only run from monitor,and as I have used page zero locations  
\*basic cannot be used as well.

Here is the explanation of how it runs.  
5100-5107 Clear lo-res screen and change to lower case character set.  
510A-5114 Set cursor to my first screen position and set screen colour black  
5117-5122 Print title. Data held in \$5200-\$52F0.  
5124-5126 Set lowest scroll position and reduce screen to 24 lines.  
5129-512B Gosub delay 'X' register holds length (so that you can read it).  
512E-5130 Set border to grey.  
5133-5135 Print text border in line 25 (small blue squares).  
5138-5144 Set registers for printing lines of text held in \$5300 on and set  
\* cursor colour for end of game.  
5147-514b disable interrupts ,set 'y' register to print 32 lines of text and  
\* save copy on stack.  
514C-514F Set 'y' register to six and save copy on stack,this is the number  
\* of times we have to shift the screen up before the next line  
\* becomes visible,if you look at line \$5162 you can see I have used  
\* the command BPL (branch if plus remember that zero in hexadecimal  
\* is a plus number so this routine will be carried out seven times).  
5150-5155 Checks to see if raster is at the bottom of the screen if not wait  
5157-515C Shift screen up one pixel and gosub short delay.  
515F-5162 Do it seven times.  
5164-5169 Wait until raster is near the bottom of the screen.  
516B-516D When it is reset scroll register and.....  
5170-519F Take the second line and put into the first line on the screen  
\* and do the same for all the other lines,thus scrolling the screen  
\* up one line.  
51A1-51A3 Print a line of blue squares in line 25 ((hidden).  
51A6-51C3 Overprint this line with text from data held in \$5300 on,\$D2 holds  
\* the offset from the beginning of the page of data and is increased  
\* by one for every character printed,'X' register makes sure only  
\* one line is printed and by starting the print one character in  
\* from left hand edge and stopping one character short at right hand  
\* edge a blue square border is created.  
51C5-51CA Checks if 32 lines have been printed,if yes then enable interrupts.  
51CB-51CD Reset scroll register to normal and return to 25 lines.  
51D0-51DA Wait for any key input,then return to upper case character set and  
\* jump to next part of the programme.  
51DD-51EA Prints a line of blue squares at the bottom of the screen,line 25  
\* 'X' register holds the number of characters to be printed.  
51F4-51FF Simple delay routine,'X' register holds length of delay.  
5200-52F0 Data for title.  
5300-57BF Data for instructions.  
\* NOTE...if you want to run this part of the programme,and I hope  
\* you do!! Then type in (on a new line) A5080 JMP\$5080 and press  
\* return. once you have run the programme press reset button to end.  
\* And thats all till next month. as always any problems or  
\* suggestions just phone me on 01 367 3152 or better write in to  
\* the magazine!!!!.....PETER.

# PAGE-SETTER

© by FU-Soft

Endlich gibt es für den Plus 4 ein brauchbares Programm, mit dem eine ganze Seite Text mit beliebigen Schriften und eingebundenen Grafiken erstellt werden kann. Im Gegensatz zu bisherigen Programmen ist jede Handlung sofort auf dem Grafikbildschirm sichtbar. Sogar einen Komplettüberblick über die Seite kann man sich jederzeit verschaffen. Neben vielen üblichen Grafikfunktionen ist auch eine Möglichkeit enthalten, die bisher kein anderes Programm für den kleinen Plus 4 aufweisen kann: Das Vergrößern und Verkleinern von Grafiken in kleinen Stufen!

<ul style="list-style-type: none"> <li>- Textdirekteingabe mit beliebigen Zeichensätzen, wahlweise Blocksatz, Flattersatz oder Zentrieren</li> <li>- Beliebiges Einbinden von Grafik</li> <li>- frei definierbarer Rand und mehrspaltiger Satz</li> <li>- freies Umschreiben von Bildern</li> </ul>	<ul style="list-style-type: none"> <li>- Zeicheneditor mit vielen Funktionen</li> <li>- Pixelweises Zeichnen oder Zeichnen von Linien, Vierecken, Rahmen, Kreisen, Ellipsen, Vielecken</li> <li>- Vielseitige Blockfunktionen</li> <li>- Kopieren, löschen, spiegeln, drehen, verkleinern und vergrößern</li> </ul>	<ul style="list-style-type: none"> <li>- Lupe, über die ganze Seite beweglich</li> <li>- Überblick über die fertige Seite</li> <li>- Druck mit MPS 803 oder 6813 im Epson-Mode</li> <li>- 2-Floppy-Betrieb möglich</li> <li>- Directory-Funktion</li> <li>- Komprimierung der Grafiken</li> </ul>
---	---	---

Das Programm besteht vollständig aus Maschinencode. Selbstverständlich gehört eine Bedienanleitung dazu, um alle Funktionen nutzen zu können. Auf der Diskette

befinden sich auch mehrere Schriftarten und einige Demo-Grafiken.

In Vorbereitung: weitere Schriften, Tool zur Eigenerstellung von Schriftsätzen, Schnittstelle zu Create Page und Botticelli.

CONT FROM  
PAGE 4

will be available in February 1984. The Commodore 264 version will exploit the full range of 128 colors and will be available sometime in April 1984. Both versions will use either the Commodore joystick, or optionally, Commodore's new lightpen. Pricing information is not yet available.

'We are delighted to be working with Commodore Business Machines', says Daniel Remer, president of Island Graphics. 'Their distribution and marketing abilities will bring the Micro Illustrator to many of thousands of new users. The Commodore 264 version is going to be the best there is.'

Island Graphics is a design and development firm located on Bethel Islands in California. They specialize in mass market graphics packages for personal computers. Island Graphics has developed software for Atari, Chalkboard, and Koala Technologies, to name a few.

END.

Please send me issue 11&12 Bumper Issue of 'C16/C116/+4 COMPUTING MONTHLY'.

I enclose a PO/CHEQUE for the value of £2.00.

NAME & ADDRESS:

SIGNED: \_\_\_\_\_

---

The above form should only be filled in by those who order the mag monthly, not by those who subscribe yearly. Monthly subscribers can photocopy the form so you don't chop up the mag, but please send it when ordering the issue required as it saves me a lot of time and you will get your mag much more quickly.
